**APPENDIX:  
MARKED UP VERSION OF SPECIFICATION AND CLAIM AMENDMENTS**

IN THE SPECIFICATION

At page 10, line 9:

The flow resistance (R) of an exemplary liquifier 26 may be evaluated experimentally. Experiments performed on a 2 inch long liquifier tube running at a flow rate of  $2000 * 10^{-6}$  [square inches per second ( $\text{in}^2/\text{sec}$ )] cubic inches per second ( $\text{in}^3/\text{sec}$ ) show that 5.5 pounds-force (lbf) of filament force are required to maintain that flow rate. This situation yields a feed pressure of 1430 psi for 0.070 inch diameter filament. As a result, the resistance of the system may be calculated as follows:
